

CORPORATE FACT SHEET

COMPANY OVERVIEW

With four offices throughout Europe (UK, Germany, Switzerland, France), Emenda provides software development and software testing consultancy and tools to customers worldwide. Our goal is to help implement rigorous testing strategies that improve the quality of software produced and minimize the risk of software defects escaping into the field.

Do you have problems with unmanageable code, software maintenance issues or do you need to meet customer specified quality standards but don't know where to begin? Do you have software that needs independent testing? If so, Emenda can help you.

tr.v [latin]

1. to improve, raise standards
2. to make free from errors
3. to raise level of quality

CORE BUSINESS

Emenda specialize in the development and testing of safety critical, business critical or high integrity software systems. Using the latest tools and techniques, our consultants work with our customers to develop automated, in-process testing solutions. From a wealth of experience, we can also provide your organization with accurate and independent advice on which tools and processes will best suit your company's needs.

We seek to provide top quality software products, technical consultancy, training, services in the area of safety critical testing and software development. Emenda can help if you're looking to improve your code quality, generally, or you need to find a solution for one of the following more specific issues:

- **Insufficient testing**
- **Independent verification**
- **Slow test development**
- **Low test coverage**
- **Unstable code**
- **Unmaintainable code**
- **Architecture degradation**
- **Meeting standards (DO178B, FDA, CENELEC, MISRA, etc)**

We provide consultancy work that can be in the form of one or two day workshops, or longer term assignments with our leading technical consultants working on customer locations. Emenda has a solid commitment to the improvement of software quality. As well as offering our customers world-class solutions, we offer innovative and high quality consulting services to dramatically improve software quality.

PRODUCTS

Emenda distributes, markets and supports world leading, technically innovative solutions to customers in all major application domains. All the products Emenda provides are aimed at improving software quality:

Lattix enables you to create, communicate and control the architecture of your software systems.

Features include:

- Dependency Structure Matrix (DSM) technology
- Architecture Refactoring
- Capability to identify problems and bad dependencies instantly
- Architecture mapping to actual code
- Defect reduction & keep your design clean

ElectricAccelerator accurately executes parallel builds across a cluster of standard servers, delivering a reduction in build times by up to 20x whilst maintaining build accuracy.

ElectricCommander automates and accelerates the software build-test-deploy process, allowing faster cycle time and more efficient hardware utilization, plus reliable continuous integration through preflight builds and test.

Cantata++ provides unit and integration testing capabilities for C/C++ & Java.

Features include:

Cantata++

- Unit and integration testing on both host and target platforms
- Automatic test script generation
- Stubbing and wrapping
- White and black box testing
- Integrated Coverage Analysis
- Modular test harness
- Eclipse IDE integration

Klocwork Insight

Enabling the Developer

Klocwork can detect:

- NULL pointer dereferences
- Memory leaks
- Usage of released memory
- Buffer overflows
- Deadlocks
- Resource leaks
- DNS spoofing

With Klocwork Insight, developers check in bug-free code - every time. Klocwork Insight is the first source code analysis solution for C, C++, C# & Java that delivers the power and accuracy of a system analysis right to the developer desktop.

Codenomicon DEFENSICS enables companies to pre-emptively mitigate unknown and published threats in products and services prior to release or deployment - before systems are exposed, outages occur and zero-day attacks strike.

DEFENSICS offers unparalleled black-box, negative testing against the broadest set of applications; spanning over 130 Internet, wireless and digital media protocols.
